

Q6 Edge

QUANTUM
LIFE BEYOND LIMITS

Positioning Options and Accessories

ENHANCED BY

Q6 Edge Positioning options

The New Quantum/Pride Q6 Edge Powered chair is a very compact versatile chair with great pricing and exceptional performance. Stealth Products has developed mounts and adapters to provide more support, positioning and functionality of the vast accessories we have available for this system.

Head Positioning

Stealth has utilized our 17mm square tube mounting hardware in order to adapt to the confined space available on the Q6 Edge back. With the TWB485 hardware our amazing link technology can be used for unlimited positioning possibilities.

i2i Series

The (i2i) works as an exoskeleton, by providing midline head positioning and cervical support while maintaining range of motion. It's name tells it's story by bringing the users head and neck to more of a midline position, improving communication, perception, and health.

Ultra Series

The (SU) Stealth Ultra headrest has the widest range of adjustments for support and positioning. Swing away pads and switches can be added to give a wide range of support and functions. The sub-occipital provides a shelf for the base of the head to rest upon. While also providing proper support for the upper occipital area.

Comfort Plus Series

For standard head support we offer our Comfort Plus (CP) series. This headrest can be equipped with embedded egg or proximity switches for a sleek look.

Tri Comfort Plus Series

Take the standard out of the standard with the latest Stealth's headrest, the Tri-Comfort Plus series. Almost like the Combo Series, the Tri-Comfort extends with ergonomic lateral support that promote additional stability and resting points. With many options to choose from the TCP series is versatile and easy on the eyes.

Combo Series

We Also offer a winged Combo (CB) that cradles the head with out having additional lateral head supports. It consists of a posterior pad and two lateral pads.

All Positioning Series

For positioning and support, the All Positioning (AP) is a simple but sleek headrest. Made of a very unique malleable metal, the AP can be adjusted on demand.

TWBADD
TWB Adductors

Twbl Hardware

The Worlds Best Laterals Series (TWB) are the most versatile laterals on the market. The TWBL can be used for thoracic (TWBL) and pelvic support (TWBADD) and come in a miniaturized (niño) pediatric version (TWBNL). These have the link hardware that can be adjusted to accommodate any size client by adding more links and swing out of the way for easy transfers. The added Full Surface Contact (FSC) feature takes this lateral to a whole new level by offering support on a 360° axis. It allows the pad to simulate a therapists hands by rotating to the curvatures of the body. If parts of the chair interfere with the swing away feature, then the SWINK option would give a second position for links to swing away.

TWBSTL
TWB Thin Lateral

Thin Laterals

We also offer a sleeker thin style lateral (TWBTTL) and with additional link (TWBSTL) that have a slim line profile and reduced weight. The thoracic laterals mount with a after market track developed by Stealth Products for the Q6 Edge chair while the pelvic utilizes the tracks on the seat.

ARMS-ES
Elbow Stop/Support

Elbow Stops

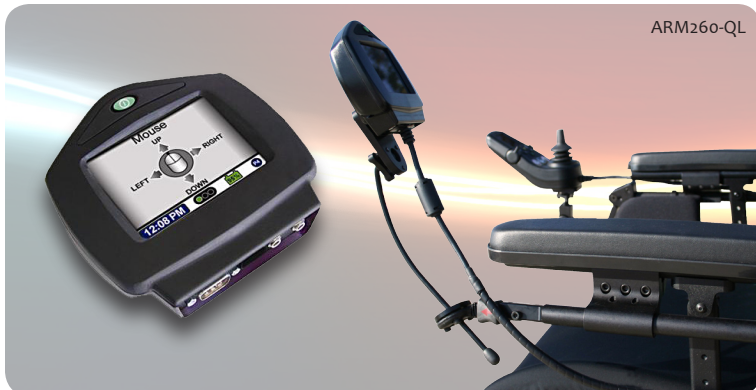

These support/stops feature the swing away option and the rotating pads that will move in almost any direction. They can be mounted on tracks or on canes. Many options are available for the foam and cover materials.

Peripheral Mounts

TWBM480-QL

Stealth Products has developed a broad spectrum of mounting options for electronics and peripherals on power chairs. Positioning of these devices in the past were simple and limited. With the "We can do it" mentality, the "Sky" is the limit for positioning of these types of devices.

ARM260-QL

We have created an endless array of mounting options for all Quantum/Q-Logic electronics, displays, and joysticks.

TWBM480-QL: The Q-Logic remote joystick mount consists of our link hardware and ball joint that rotates and positions the joystick in an ergonomic location.

ARM260-QL: The swing-away display mount is an extremely versatile, designed to offer subtle, reliable convenience. It can flip down or swing away for transfers and getting under tables.
